At page 15, line ²⁶ 22, thru the top of page 16, change the paragraph to read as follows:

The generated client side 20 of ActiveLINC is preferably written entirely in Java and consists of a runtime environment and generated Ispec components 22 and, optionally, generated GUI interface applications 21. The generated Ispec components can be used as JavaBeans or ActiveX components, so providing access to LINC application from customer-written client applications such as Microsoft Word and Excel. As the Active LINC code is written in Java, it is capable of running on any qualified Java 1.1 platform, including Apple Macintosh, UNIX workstations, Windows PCs, OS/2 PCs and Network Computers.
